Education

Georgia Institute of Technology, Atlanta, GA — **MS in Computer Science**, 3.8/4.0 — **Aug 2023 - Dec 2025**
Northeastern University, Boston, MA — **BS in Computer Science**, 3.6/4.0 — **Sep 2019 - May 2023**

Work Experience

Datadog, Software Engineer II, New York City, NY — **Jul 2026 - Present**

- Coordinated across 4 teams to build control plane tooling to protect realtime DDSketch percentile storage, cutting incident mitigation time from hours to minutes.
- Designed and implemented leader election architecture in a platform rate limiting service to enable reliable quality of service (QoS) mechanisms during billion+ cardinality traffic spikes.

Datadog, Software Engineer, New York City, NY — **Feb 2025 - Jun 2026**

- Shipped a distributed sampling HyperLogLog technique attributing metric cardinality to individual tags, improving incident response with insights on which tags drive up cardinality.
- Productionized the automated throttling system to improve high cardinality (billion+ timeseries) metrics ingestion, eliminating manual engineering toil during incidents.
- Slashed new datacenter turnup time from weeks to hours across 7 services via Terraform automation, dynamic Kubernetes configs fetching, feature flags cleanup, and Kafka events pipeline migration.

Datadog, Software Engineer Intern, New York City, NY — **Sep 2024 - Dec 2024**

- Developed a service to generate stress-testing traffic and benchmark metrics storage systems, enabling real-time insights on query latencies for high cardinality metrics.

Amazon, Software Engineer Intern, New York City, NY — **May 2024 - Jul 2024**

- Engineered a serverless AWS data pipeline to extract high-value search keywords from trending Google queries, boosting product click-through rates across a shopping SEO initiative projected at $92M in annualized worldwide revenue.

Capital One, Software Engineer Intern, Cambridge, MA — **Jun 2023 - Aug 2023**

- Modeled credit card transactions as knowledge graphs and generated graph embeddings for account/merchant analytics. Improved fraud classification model's performance by 8% with automatic hyperparameter tuning.

Amazon, Software Engineer Intern, New York City, NY — **Aug 2022 - Dec 2022**

- Built an event driven AWS ingestion system (EventBridge, Lambda, S3, Glue Spark, Cloudwatch) processing terabytes of daily search telemetry, powering product landing page relevance improvements tied to an estimated $130M in annualized sales worldwide.

Capital One, Software Engineer Intern, McLean, VA — **Jun 2022 - Aug 2022**

- Developed a self-service application to automate enterprise sensitive data tokenization workflows, reducing the amount of on-call incidents by half.

Bayer, Software Developer Co-op, West Sacramento, CA (Remote) — **Jun 2021 - Dec 2021**

- Developed a web application for data analytics and visualization of bioassay data, automating the workflow of crop scientists and researchers to save their time.

Skills

Languages: Go, Python, Java, C/C++, SQL, TypeScript
Systems & Infrastructure: Kubernetes, Kafka, AWS, Spark, ZooKeeper, Terraform, Docker, gRPC, Linux
