Education

Georgia Institute of Technology, Atlanta, GA — **MS in Computer Science**, 3.8/4.0 — **Aug 2023 - Dec 2025**
Northeastern University, Boston, MA, — **BS in Computer Science**, 3.6/4.0 — **Sep 2019 - May 2023**

Work Experience

Datadog, Software Engineer, New York City, NY — **Feb 2025 - Present**

- Migrated a critical service's event pipeline to a modern system, replacing direct message queue writes to enhance data integrity and scalability.
- Led the automation of cloud resources creation, deprecation of feature flags, and dynamic fetching of Kubernetes configs to enable faster service launches in new datacenters.

Datadog, Software Engineer Intern, New York City, NY — **Sep 2024 - Dec 2024**

- Developed a service to generate traffic and benchmark storage systems, enabling real-time insights on query latencies for high cardinality metrics.

Amazon, Software Engineer Intern, New York City, NY — **May 2024 - Jul 2024**

- Developed a serverless data pipeline on AWS to source high-value keywords from trending Google search queries that lead to more customer clicks.
- Improved search engine optimization for Amazon products, contributing to an estimated increase of $92 million in annual sales worldwide.

Capital One, Software Engineer Intern, Cambridge, MA — **Jun 2023 - Aug 2023**

- Modeled credit card transactions as knowledge graphs and generated graph embeddings for analytics such as predicting relations between accounts and merchants or finding similar merchants.
- Improved fraud classification model’s performance by 8% with automatic hyperparameter tuning.

Amazon, Software Engineer Intern, New York City, NY — **Aug 2022 - Dec 2022**

- Developed a serverless big data ingestion system on AWS with EventBridge, Lambda, S3, Cloudwatch alarms, dashboards, and Glue Spark jobs to process terabytes of customer search data.
- Enabled more relevant product landing pages and better shopping experience for customers, contributing to an estimated increase of $130 million in annual sales worldwide.

Capital One, Software Engineer Intern, McLean, VA — **Jun 2022 - Aug 2022**

- Developed a self-service application to automate enterprise sensitive data tokenization workflows, reducing the amount of on-call incidents by half.
- Implemented backend REST APIs in Python that query a MySQL database and send notification emails to users of the application and relevant stakeholders.

Bayer, Software Developer Co-op, West Sacramento, CA (Remote) — **Jun 2021 - Dec 2021**

- Developed a web application for data analytics and visualization of bioassay data, automating the workflow of crop scientists and researchers to save their time.
- Implemented CI/CD using GitHub, Docker, AWS CodeBuild, and AWS Fargate with Load Balancers.

Khoury College of Computer Sciences, Teaching Assistant, Boston, MA — **Jan 2021 - May 2021**

- Held office hours for CS 2810, assessed 300+ students, and collaborated with Prof. Kevin Gold

Skills

Languages: Python, Java, Go, SQL, JavaScript, TypeScript, C, C++, HTML, CSS
Technologies: Git, Linux, AWS, Kubernetes, Kafka, gRPC, Spark, Flask, Plotly Dash, Lit, React, Docker
